

What is claimed is:

1. An image information transmitting system comprising:

a user terminal apparatus which obtains an IP
5 address on an IP network; and

a scanner apparatus which transmits image
information to said user terminal apparatus using
said IP address,

wherein said user terminal apparatus registers
10 said obtained IP address to said scanner apparatus
and re-registers said IP address to said scanner
apparatus when a lease period of said IP address
elapses.

2. The system according to claim 1, wherein
15 information relating to said lease period is decided
by said user terminal apparatus, and said decided
information is sent to said scanner apparatus from
said user terminal apparatus.

3. The system according to claim 2, wherein
20 information relating to said lease period is sent
to said scanner apparatus from said user terminal
apparatus using a connectionless typed
communication protocol.

4. The system according to claim 3, wherein said
25 connectionless typed communication protocol is a UDP
protocol.

5. A scanner apparatus which transmits image

10058117.012902

information to a user terminal apparatus which obtains an IP address on an IP network using said IP address comprising:

5 a user terminal IP address acquiring section which acquires said IP address obtained by said user terminal apparatus based on a notification sent from said scanning apparatus;

an IP address storing section which stores said acquired IP address; and

10 an IP address managing section which deletes said stored IP address from said IP address storing section when a lease period of said IP address elapses.

6. The apparatus according to claim 5, wherein
15 information relating to said lease period is sent to said scanner apparatus from said user terminal apparatus.

7. The apparatus according to claim 6, wherein information relating to said lease period is sent
20 to said scanner apparatus from said user terminal apparatus using a connectionless typed communication protocol.

8. A user terminal apparatus comprising:

an IP address acquiring section which acquires
25 an IP address on an IP network; and

an IP address registering section which registers said acquired IP address to a scanner

10058417.012902

apparatus,

wherein said IP address registering section re-registers said IP address to said scanner apparatus when a lease period of said acquired IP address elapses.

9. An image information transmitting method which transmits image information to a user terminal apparatus which obtains an IP address on an IP network from a scanner apparatus using said IP address,

10 wherein said IP address obtained by said user terminal apparatus is registered to said scanner apparatus and said IP address is re-registered to said scanner apparatus when a lease period of said IP address elapses.

15 10. The method according to claim 9, wherein information relating to said lease period is decided by said user terminal apparatus, and said decided information is sent to said scanner apparatus from said user terminal apparatus.

20 11. The method according to claim 10, wherein information relating to said lease period is sent to said scanner apparatus from said user terminal apparatus using a connectionless typed communication protocol.

25 12. The method according to claim 11, wherein said connectionless typed communication protocol is a UDP protocol.
